- 143,000 LINES OF SEWING MACHINE PART NUMBER INFORMATION
- 4000 pdf Files linked to Part numbers Models and Brands
- Parts Books Instruction Books Service Books
- www.perfectsew.com.au
- Ph. 0411554571
- 274 Railway Parade Noble Park Victoria 3174
- Australia

Search results will vary depending on the search criteria you use.

- If you want to search for a specific item from a specific brand. You should search the Part Type column.
- E.G. to find a Brother motor you should ask for 18 which is the item number for motors and 8 for Brother, in the part type column you would ask for a search 18-8 which will return all Brother motors
- As 18 is the item number for motors in the part type column
- You would ask for 18-33 for Singer motors 18-28 for Pfaff motors 18-11 for Elna motors
- By opening any of the pdf files in the first five lines of data base information you will be able to find the combinations of part type and brand

Different ways of searching the Data base

- If you had a situation where a part has a part number on it and you want to find out what machine it fits, then you would search the part number column.
- If the part number is in the data base it will come up on the list along with any models and brands that use that part.
- If the part comes up on the list you will also be able to click on the coloured icon to open the parts book. You can then identify it and confirm that the information is correct.
- Once you have the information you need the item is identified and confirmed correct for use or sale.

Description

In the Search by box: select Part No

In the Search box enter the part number

- Search by: Part number
- When you search by part number the search result will show all models and brands listed using that part number
- Search: 155819
- Click on the purple **Search** to obtain a search result from the Data base. Click on the Red box with the white X to return the data base to the full list

In the Search by box: select Part Type

In the Search box enter 1-33

- When you select:
- Part Type in the **Search by** box.

This will allow you to obtain search results from the part Type column. The part Type column is designed to enter a combination of any two numbers. For example 1 is the number for bobbins and 33 is the number for Singer, by entering 1-33 in the Search box

- You will return all bobbins in the system belonging to Singer models.
- By changing the number 33 to number 8 you will return all bobbins in the system for Brother.
- 1-28 will return all Pfaff bobbins.
- 1-18 will return all Janome bobbins

Instruction Book and numbering systems for MAXISEW DATA EZI

- Line numbers 1,2,3,4,5 of the Maxisew Data Ezi data base are as follows:
 - 1: Data Ezi part type search numbers Click on the colour icon to open.
 - 2: Data Ezi models list all Brands. Click on the colour icon to open.
 - 3: Data Ezi Brands Search numbers list. Click on colour icon to open.
 - 4: Data Ezi Stock location list. Click on colour icon to open.
 - 5: Data Ezi Instruction book. Click on colour icon to open.
- **Open these files to find search numbers for more combinations**

Search by Model Id

- In the **Search by box** Select: Model Id
- In the **Search box** enter the model number of the machine you are searching. For example. XL100 and click on Search.
- This will return all parts belonging to Singer XL100.
- Change the model number to SR2000 and click on search.
- This will return all parts belonging to Janome SR2000
- Repeat with the model number you require to browse the part list for each model. Click on the coloured icon to open the PDF File.

Important note in some instances more than one Brand use the same model number.

- To separate one Brand from another I added another column called
- **Model List**
- In this column I have allocated another number for each model.
- When you search a model such as SR2000 you will see 7751 in the **Model List** column To separate Janome SR2000 from another brand all you need to do is search 7751 in the Model List column which will return only Janome SR2000 parts.

Search by Brand Id

- In the Search by box: Select: Brand Id
- In the Search box: enter the Brand of the machine you are searching for.
- Example Singer is 33, Brother is 8, Pfaff is 28, Babylock is 4, Bernette is 5, Globe is 13, Elna is 11 etc. Open the Brands pdf On line no.3 at the beginning of the data base to see the list.
- If you ask for 33 for example you will get a return in the vicinity of 30,000 lines of Singer parts information to browse through so this search is not used very often.

Search by location:

- In the Search by box: Select: Stock Location
- In the Search box: Enter the model list number-the part type-the brand.
- Using Singer XL100 as an Example: 7751-1-33
- This combination will find the bobbin information for Singer XL100 Sewing machine. If there is more than one bobbin type, metal or plastic they will come up together. The above example is also the stock location for these parts.

Description written text

- In the Search by box: Select: Description
- In the Search box: To search by description you will need to write the full line of text as it is written, otherwise the search will fail.
- Search results are much easier to use than description searches.

How to get around the data base options

- Option 1. Search by part number
- The search results will give you all Brands and Models that use this part number.
- Option 2. search by part Type.
- To use this option you will need to use the number information for the item you need to search
- This information can be found by opening the pdf file on line one of this data base and the information in the pdf file on line 2 of this data base.
- Example part type 18 is for motors. Singer brand is 33
- To search for Singer motors use 18-33

Search options continued

- To find Brother motors search using 18 for motors and 8 for Brother Brand 18-8
- To find Elna motors search using 18 for motors and 11 for Elna brand 18-11 and so on.
- Use the item number PDF File on line one of the Data Base for the item number and use the Brand pdf file on line 2 for the Brand number.
- Example: 4-11 will return all sewing feet for Elna machines.
- 4-33 will return all sewing feet for Singer machines

Search the model column

- In the Model column search model 6236 this will return all parts listed for Singer 6236
- If we search 744 you will find that model 744 is listed for Singer, Elna, and Pfaff so searching 744 will bring up all parts for three different brand models.
- To separate these I have added a Model List column. Each different brand model has had a unique number added to each brands model.
- Example Singer 744 is 5502
- Elna 744 is 5481
- Pfaff 744 is 5484

Stock Location search explained

- Using the number in the Model List column as the first number in the stock location column allows me to search by stock location.
- Example: 5502-18-33 will bring up Singer 744 sewing machine motor as this is a unique number combination it is also a stock location.
- By using the search columns in different ways you can call up many different types of information in seconds thus making this a very powerful and useful Data base. You also have the option to open the PDF Files by clicking on the coloured icon
